

Have you been diagnosed with psoriatic arthritis?

The **IM011-054** and **IM011-055** clinical research studies are evaluating an investigational medication for reducing inflammation and joint pain in those diagnosed with psoriatic arthritis (PsA).

You may be eligible if you:

- Have been diagnosed to have PsA of at least 3 months duration at Screening
- Meet the Classification Criteria for psoriatic arthritis (CASPAR) criteria at Screening
- Have active plaque psoriatic skin lesion(s) or documented medical history of plaque psoriasis (PsO) at Screening
- Have active arthritis as shown by ≥ 3 swollen joints and ≥ 3 tender joints at Screening and Day 1

The study doctor will also check other requirements to decide if you are eligible to take part in this study.
